PROFESSIONAL SUMMARY

Confident IT professional with 3+ years delivering enterprise technology outcomes in high-demand environments. Early and practical adopter of AI in IT operations, using AI-assisted troubleshooting and workflow automation to improve speed, quality, and operational control. Ready to take on broader roles where AI, automation, and strong IT execution drive measurable business outcomes.

PROFESSIONAL EXPERIENCE

IT Service Desk Analyst / Service Desk SME - NTT, Wellington

November 2022 - Present

- Support a 5,000+ user environment across shared-service and single-organisation engagements in transport, healthcare, energy, regional government, and consumer goods.
- Currently provide dedicated BAU Service Desk support for a major transport-sector client, with 2.5+ years in this engagement within a team delivering 90%+ first contact resolution.
- Act as first point of contact for BAU incidents and service requests, owning triage, resolution, documentation, and escalation.
- Administer Active Directory and Entra ID daily, including user lifecycle, group access, and privileged account workflows within SDA scope.
- Serve as Service Desk SME for Privileged User Access Requests, managing end-to-end provisioning of admin, local admin, shared, and external accounts.
- Daily support across Microsoft 365, Exchange Online, and Intune, including device administration and endpoint management.
- Deliver identity and access troubleshooting including MFA support via Entra ID, BitLocker recovery, and Intune-managed endpoint compliance.
- Use Nexthink to identify, analyse, and support resolution of endpoint performance and device health issues.
- Use Jira Service Management and ServiceNow daily for incident, request, and escalation management.
- Provide remote end-user support through TeamViewer to resolve application, device, and access issues without onsite intervention.

SELECTED ACHIEVEMENTS AND SME RESPONSIBILITIES

- Printer Services SME for a major enterprise client, with operational ownership of the printer vendor queue.
- Service Desk SME for a managed print vendor transition, including project meeting participation and direct coordination with vendor representatives.
- Extended effectiveness into Level 2 support by resolving printer configuration issues within Service Desk, reducing avoidable escalations.
- Workflow optimization: designed bulk-change execution, filter logic, and cross-ticket identity linkage to reduce handling demand below the previous single-ticket baseline.

- Operational visibility: converted formal three-ticket schema granularity into stronger triage precision, traceability, and improved resolution outcomes.
- Transition advisory: served as SME during transition away from the three-ticket vendor model, advising how to retain classification and workflow visibility benefits.
- Automation: built AI-assisted troubleshooting scripts using modern development tooling adopted into production workflows for vendor-supplied enterprise applications.
- Migration recovery: diagnosed enterprise application migration failures linked to shortcut handling and logon cache behavior, helping restart a deferred upgrade programme.
- Looking to expand AI-assisted troubleshooting playbooks across additional externally supplied applications.

TECHNICAL SKILLS

- Active Directory and Entra ID administration (user, group, access, privileged accounts)
- Intune device administration, compliance, and endpoint policy support
- Microsoft 365 and Exchange Online
- MFA support, identity troubleshooting, and BitLocker recovery
- Windows desktop and application support
- Jira Service Management, ServiceNow, TeamViewer, and Nexthink

QUALIFICATIONS

- AWS Certified Cloud Practitioner
- AWS Foundations of Cloud Computing - Unitec / Te Pukenga
- Bachelor of Arts (History and Political Science) - Griffith University
- NTT internal certifications, including ongoing AI training programme

ADDITIONAL STRENGTHS

- Clear, professional communication in public-facing and technical contexts
- Calm, methodical problem solving in BAU and project environments
- Continuous self-directed learning in identity, endpoint management, and AI-assisted IT operations
