AI-Forward | Enterprise IT Operations | Process Improvement

CONTEXT

- In my own time, intensely engaged in learning and using AI.
- Building projects at different scales.
- This immersion is the broader context for my current skill and drive within IT.

NTT, WELLINGTON — PRESENT

Initiative in Scope

Active Project

COMPLETED

- Built an AI-developed endpoint fix script for a major vendor application.
- This involved AI-driven research and coding.
- Observed application behaviour under different conditions.
- Tested different approaches and script versions on a dedicated test device.
- The script passed validation and went into production for individual endpoint failures.
- L2 bundling of the script with the existing install package failed.
- The script was not at fault.
- This led to investigation of the install package itself.

ACTIVE

- Rebuilding the enterprise app package from the proven fix.
- Test-device validation is complete.
- Further rollout stages are ahead.

Delegated Scope

- I am responsible for management of the printer queue serviced by a major external vendor.
- Supported a printer vendor transition through vendor liaison and project involvement.
- Resolved printer configuration issues beyond normal front-line scope.
- Reduced avoidable escalation.
- Reworked a fragmented multi-ticket process using bulk changes, filter logic, and cross-ticket identity linkage.
- Improved traceability across related requests.
- Cut staff time and repeat work.
- Advised on preserving classification and workflow visibility during transition away from the three-ticket vendor model.

ROLE PROGRESSION *Began IT role, November 2022*

- Support a 5,000+ user environment across shared-service and single-organisation clients.
- Support clients in transport, healthcare, energy, regional government, and consumer goods.
- Progressed into dedicated BAU support for a major transport-sector client.
- Work within a team achieving 90%+ first-contact resolution.
- Handle incidents and service requests from triage through resolution, documentation, and escalation.
- Resolve user, device, application, and access issues through structured remote support.
- Analyse endpoint performance and device health issues.
- Manage identity, access, and account lifecycle tasks within service desk scope.
- Act as SME for privileged access requests across admin, local admin, shared, and external account types.

TECHNICAL SKILLS

- Identity and access administration
- Messaging and Microsoft 365 support
- Endpoint and device administration
- Enterprise applications and deployment
- Network and connectivity troubleshooting
- Service operations and remote support
- Knowledge, process, and documentation
- AI in IT operations

QUALIFICATIONS

- AWS Certified Cloud Practitioner
- AWS Foundations of Cloud Computing — Unitec / Te Pūkenga
- Bachelor of Arts, History and Political Science — Griffith University
- NTT internal certifications, including AI training
