Context

- Deeply engaged in learning and applying AI in my own time.
- Building projects at different scales.
- Personal investment supports continued technical growth.

NTT, Wellington — Present

Initiative in Scope

Active Project

Completed

- Built an AI-assisted endpoint fix script for a major vendor application.
- This involved AI-assisted research and coding.
- Observed application behaviour under different conditions.
- Tested approaches and script versions on a dedicated test device.
- The script passed validation and entered production for individual endpoint failures.
- L2 bundling with the existing install package failed.
- The script was not at fault.
- This led to investigation of the install package itself.

Active

- Rebuilding the enterprise app package from the proven fix.
- Test-device validation is complete.
- Further rollout stages remain.

Delegated Scope

- I manage the printer queue serviced by a major external vendor.

- Supported a printer vendor transition through vendor liaison and project work.
- Resolved printer configuration issues beyond normal front-line scope.
- Reduced avoidable escalation.
- Reworked a fragmented multi-ticket process using bulk changes, filter logic, and cross-ticket linkage.
- Improved traceability across related requests.
- Cut staff time and repeat work.
- Advised on preserving classification and workflow visibility during the transition away from the three-ticket vendor model.

Role Progression Map From service desk baseline to AI-forward operational delivery

Service Desk Foundation

- Began in November 2022 in a 5,000+ user environment across shared-service and single-organisation clients.
- Supported clients in transport, healthcare, energy, regional government, and consumer goods.
- Handled incidents and service requests from triage through resolution, documentation, and escalation.
- Resolved user, device, application, and access issues through remote support.

Trusted Operational Scope

- Progressed into dedicated BAU support for a major transport-sector client.
- Worked in a team sustaining 90%+ first-contact resolution.
- Analysed endpoint performance and device health issues as part of day-to-day support.
- Managed identity, access, and account lifecycle tasks within service desk scope.

Specialist and Improvement Scope

- Became the SME for privileged access requests across admin, local admin, shared, and external account types.
- Took on vendor-facing queue and transition responsibilities beyond normal front-line scope.
- Reworked a fragmented multi-ticket process using bulk changes, filter logic, and cross-ticket linkage.
- Reduced avoidable escalation, improved traceability, and cut staff time and repeat work.

AI-Forward Operational Delivery

- Applied AI-assisted research and coding to build an endpoint remediation script for a major vendor application.
- Moved the work from test-device validation into controlled production use for individual endpoint failures.
- Turned remediation results into evidence for package investigation and rebuild work.
- Continued into enterprise package reconstruction from the proven fix.

Technical Skills

- **Identity and access administration:** Active Directory, Entra ID, local admin, guest accounts, privileged access, account lifecycle
- **Messaging and Microsoft 365 support:** Exchange Online, mailbox creation, mailbox access, shared mailboxes, distribution groups, Microsoft 365 support

- **Endpoint and device administration:** Intune, compliance, BitLocker recovery, Windows support, drivers, disk space, device administration
- **Enterprise applications and deployment:** vendor applications, packaged installs, application faults, cache issues, shortcut issues, deployment support
- **Network and connectivity troubleshooting:** DNS issues, connectivity faults, first-line network diagnosis, escalation to specialist teams
- **Service operations and remote support:** Jira Service Management, triage, incident and request handling, escalation, queue workflows, remote support
- **Knowledge, process, and documentation:** documentation, knowledge base use and creation, troubleshooting steps, workflow traceability
- **AI in IT operations:** AI-assisted research, troubleshooting, scripting, package rebuild, workflow improvement

Qualifications

- AWS Certified Cloud Practitioner
- AWS Foundations of Cloud Computing — Unitec / Te Pūkenga
- Bachelor of Arts, History and Political Science — Griffith University
- NTT internal certifications, including AI training
