TECHNICAL OPERATIONS SUMMARY

IT Service Desk Analyst at NTT DATA with hands-on technical operations experience across endpoint remediation, package reconstruction, vendor application support, deployment support, and privileged access handling.

Additional scope includes endpoint performance and device health analysis, printer/vendor transition work, queue/process improvement, and AI-assisted research and scripting.

CURRENT EMPLOYMENT

IT Service Desk Analyst — NTT DATA

Wellington, New Zealand | November 2022 – Present

SELECTED TECHNICAL DELIVERY

- Built an AI-assisted PowerShell endpoint remediation script for a major vendor application.
- Script passed validation and entered production for individual endpoint failures after dedicated test-device work.
- Used remediation results to identify package-level deployment issues requiring further reconstruction.
- Rebuilding the enterprise app package from the proven fix; test-device validation is complete and further rollout stages remain.

TECHNICAL OPERATIONS SCOPE

- Analysed endpoint performance and device health issues as part of day-to-day support.
- Managed identity, access, and account lifecycle work across Active Directory and Microsoft administration surfaces, including privileged access handling.
- Supported printer vendor transition and resolved printer configuration issues beyond normal front-line scope.
- Improved traceability and reduced repeat work through bulk updates, filtering, and cross-ticket linkage.

CORE TECHNICAL OPERATIONS SKILLS

- Endpoint/device: Intune, compliance, BitLocker recovery, Windows support, drivers, disk space, device administration
- Applications/deployment: vendor applications, packaged installs, application faults, cache issues, shortcut issues, deployment support
- Access/admin: Active Directory, Entra ID, security groups, privileged access, account lifecycle, Microsoft 365 admin center, licensing
- Tooling/process: ServiceNow, Jira Service Management, ITSM, remote/admin tools, troubleshooting, scripted fixes, PowerShell tooling, AI-assisted troubleshooting/scripting

SUPPORTING FOUNDATION

- Supported users in a 5,000+ user environment across shared-service and single-organisation clients.
- Owned incidents and service requests from diagnosis through resolution, documentation, or evidence-based escalation.

QUALIFICATIONS

- AWS Certified Cloud Practitioner | AWS Foundations of Cloud Computing — Unitec / Te Pūkenga
- NTT internal certifications, AI training, and Skillsoft Percipio coursework spanning Azure fundamentals preparation, AI fundamentals, service management, security awareness, and enterprise IT support
