AI / PROCESS IMPROVEMENT SUMMARY

Enterprise IT support professional applying structured troubleshooting, documentation, traceability, and AI-assisted delivery to operational problems.

Portfolio evidence includes endpoint remediation, evidence-based package investigation, workflow improvement, and practical AI use grounded in current NTT DATA service desk operations.

CURRENT EMPLOYMENT

IT Service Desk Analyst — NTT DATA

Wellington, New Zealand | November 2022 – Present

SELECTED AI-ENABLED DELIVERY

- Built an AI-assisted PowerShell endpoint remediation script for a major vendor application.
- Script passed validation and entered production for individual endpoint failures after dedicated test-device work.
- Used remediation results to identify package-level deployment issues requiring further reconstruction.
- Rebuilding the enterprise app package from the proven fix; test-device validation is complete and further rollout stages remain.

PROCESS / WORKFLOW IMPROVEMENT

- Improved traceability and reduced repeat work through bulk updates, filtering, and cross-ticket linkage.
- Supported printer vendor transition and resolved printer configuration issues beyond normal front-line scope.
- Managed identity, access, and account lifecycle work across Active Directory and Microsoft administration surfaces, including privileged access handling.
- Applied AI-assisted research and coding to turn remediation results into evidence for package investigation and rebuild work.

CORE AI / PROCESS METHODS

- AI-assisted operations: research, troubleshooting, scripting, remediation, package rebuild
- Documentation/process: documentation, workflow traceability, troubleshooting steps, knowledge base use and creation
- Enterprise investigation: vendor applications, packaged installs, application faults, deployment support
- Operational delivery: ServiceNow, Jira Service Management, incident/request handling, remote/admin tools

SUPPORTING ENTERPRISE FOUNDATION

- Supported users in a 5,000+ user environment across shared-service and single-organisation clients.
- Owned incidents and service requests from diagnosis through resolution, documentation, or evidence-based escalation.

QUALIFICATIONS

- AWS Certified Cloud Practitioner | AWS Foundations of Cloud Computing — Unitec / Te Pūkenga
- NTT internal certifications, AI training, and Skillsoft Percipio coursework spanning Azure fundamentals preparation, AI fundamentals, service management, security awareness, and enterprise IT support
